

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

APPLES

ARKANSAS BLACK

This beautiful, deep red, late maturing apple tastes even better after a time in storage. Best for fresh eating, sauces and baking. Mid-season bloomer. **Pollinator required. Semi-dwarf** Zone 5.

BRAEBURN

This New Zealand introduction produces late ripening sweet, yet tart fruit. Best for fresh eating and winter keeping. Early bloomer. **Pollinator required. Semi-dwarf** Zone 5.

CORTLAND

Very hardy tree. A large red striped apple with McIntosh parentage. Best for fresh eating, pies, and cooking, canning and winter keeping. Mid-season bloomer. **Pollinator required. Semi-dwarf** Zone 4.

EMPIRE

A McIntosh x Red Delicious cross that has great McIntosh flavor with the crispness of Red Delicious. Keeps well. Best for fresh eating, sauces, and pies. Early bloomer. **Pollinator required. Semi-dwarf** Zone 4.

ENTERPRISE

Slightly tart, very crisp dessert quality red apple. Similar to Red Rome Beauty but with disease resistance. Best for fresh eating, dessert and winter keeping. Mid-to-late season bloomer. **Pollinator required. Semi-dwarf** Zone 4.

GOLDEN DELICIOUS

Golden delicious is still the world's most popular apple, but the flavor is so much better from a home grown tree! Sweet and spicy and a consistent producer. Best for eating, pies and cooking, canning and freezing. Mid-to-late season blooming. **Self-pollinating. Semi-dwarf** Zone 5.

GRANNY SMITH

A green lat-season favorite that keeps well! Heavy annual crops. Tart and full of flavor. Best for fresh eating, pies, and winter keeping. Mid-to-late season bloomer. **Pollinator required. Semi-dwarf** Zone 6.

HONEYCRISP

This dessert quality juicy apple is crisp with a mildly sweet yet delicate flavor. The skin is striped scarlet-red over yellow. The tree is tolerant to severe winter temperatures. Mid season bloomer. **Pollinator required. Semi-dwarf** Zone 4.

JONAGOLD

The best of both worlds – the tart Jonathan and the sweet Golden Delicious combine together to make this luscious apple. Jonagold is a preferred dessert apple. Mid-season bloomer. Pollen sterile. **Pollinator required. Semi-dwarf** Zone 4.

JONATHAN

A small-to-medium sized, bright red apple with fine, juicy flesh. Good for cooking and fresh eating. Heavy bearer. Early season bloomer. **Self-pollinating. Semi-dwarf** Zone 4.

LIBERTY

Disease resistant, McIntosh like flavor. Red striped apple with yellow green background. Best for fresh eating, cooking and canning. Mid-season bloomer. **Pollinator required. Semi-dwarf** Zone 4.

LODI

An heirloom variety that matures early in summer. The apples have crisp white flesh and are prized for pies and sauce. Early season bloomer. **Pollinator required. Semi-dwarf** Zone 4.

MACOUN

Cold hardy, this McIntosh-type apple is preferred by many over McIntosh, one of it's parents. Best for fresh eating, cooking, canning and drying. Mid-season bloomer. **Pollinator required. Semi-dwarf** Zone 4.

MCINTOSH

This heirloom variety has been around since the early 1800's and is a favorite in northern climates. Best for fresh eating and baking. Early-to-mid season bloomer. **Pollinator required. Semi-dwarf** Zone 4.

NEWTON PIPPIN DWARF

When ripe this variety is green but mellows to light yellow. Good for fresh eating, cider, sauces, and pies. Has historical significance as being a favorite of both George Washington and Thomas Jefferson. Antique apple. Late season bloomer. **Self-pollinating. Semi-dwarf** Zone 4.

NORTHERN SPY

A very late, large apple that is considered one of the best for pies and sauce. Late blooms assure regular crops. Must be pollinated by another late blooming apple variety. **Pollinator required. Semi-dwarf** Zone 5.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

PINK LADY DWARF

From Western Australia, this apple is one of the last to be harvested. This flavorful sweet-tart apple stores very well. Also known as Cripps Pink. Best for fresh eating and cooking. Mid-season bloomer. **Pollinator required. Semi-dwarf** Zone 5.

PRISTINE

This is one of the finest early, yellow, disease resistant apples known Best for fresh eating, desserts and baking. Mid-season bloomer. **Pollinator required. Semi-dwarf** Zone 5.

RED DELICIOUS

Fruit is sweet, crisp and beautiful. The tree produces heavy crops of extra-fancy type fruit. Best for fresh eating, desserts, and salads and winter keeping. Mid-season bloomer. **Pollinator required. Semi-dwarf.** Zone 5.

RED FUJI

Fuji's success lies in the extremely high quality fruit it produces which is great for both fresh eating and baking. Skin color is an attractive pink stripe over a green-yellow background. Keeps well. Mid-season bloomer. **Pollinator required. Semi-dwarf** Zone 5.

RED ROME DWARF

The tree is a heavy producer of beautiful cherry-red fruit. Best for fresh eating, baking, and cooking. Late season bloomer. **Self Pollinator required. Semi-dwarf.** Zone 5.

ROXBURY RUSSETT

Originated early in the 17th century in Roxbury, Mass, and is probably the oldest named variety of apple in America. Medium to large in size, and elliptical in shape, the green skin is tinged a bronze, and overspread with a brownish-yellow russet. High sugar content. Good for fresh eating and baking; excellent for cider. Late season. Antique apple. **Pollinator required. Semi-dwarf** Zone 4.

ROYAL GALA DWARF

The very best fresh-eating apple, sweet and crunchy, matures in late summer. This red-orange apple brings the highest prices in grocery stores and fruit markets. Mid-season bloomer. **Pollinator required. Semi-dwarf.** Zone 5.

STAYMAN

A heirloom apple with a wonderful sweet-tart flavor. The apples are large and deep red in color. Best for fresh eating, baking, and long storage. Late season bloomer. Pollen sterile. **Pollinator required. Semi-dwarf** Zone 5.

SUMMER RAMBO

Large, brightly striped, red fruit. Flesh is yellowish-green and crisp with an exceptionally juicy flavor. A vigorous, hardy and productive apple variety. Best for fresh eating, sauce and baking. Late season bloomer. Pollen sterile. **Pollinator required. Semi-dwarf** Zone 4.

WINESAP

This heirloom variety has been around since the early 1800's. The fruit is bursting with spicy flavor and stores exceptionally well. Best for fresh eating, cooking, canning and winter keeping. Late season bloomer. Pollen sterile. **Pollinator required. Semi-dwarf.** Zone 5.

WOLF RIVER

A heirloom variety that will produce huge apples weighing more than 1 lb. It is a good quality multipurpose apple. Best for baking and fresh eating. Mid-season bloomer. **Pollinator required. Semi-dwarf.** Zone 4.

ZESTAR

This large apple is crisp, juicy and full of flavor. Skin color is red with yellow background. Good for fresh eating and baking. Keeps well. Ripens in early August. Mid-season blooming. **Pollinator required. Semi-dwarf** Zone 5.

7 gallon \$42.00 15 gallon \$78.00

COLONADE® APPLES

EMERALD SPIRE®

An attractive green apple with a beautiful golden blush. Pick and enjoy early to mid-September. Column shape works well for container gardening or small spaces. **Mature size 8' x 2'.** **Pollinator required.** Zone 5.

GOLDEN SENTINEL™

Enjoy the wonderful spring display of snow white flowers followed by large solid gold fruit. Sweet juicy flesh is good for fresh eating and baking. Harvest in early to mid-September. Column shape works well for container gardening or small spaces. **Mature size 8' x 2'.** **Pollinator required.** Zone 5.

NORTHPOLE™

Variety has a beautiful spring showing of pure white flowers followed by a heavy crop of large, red, McIntosh-like apples. Compact growth habit is straight up with virtually no branching. Column shape works well for container gardening or small spaces. Harvest in early Sept. **Mature size 8' x 2'.** **Pollinator required.** Zone 5.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

SCARLET SPIRE®

Skin color is bright red over green and variety is great for fresh eating. Produces a nice yield of fruit in late September. Column shape works well for container gardening or small spaces. **Mature size 8' x 2'**. **Pollinator required.** Zone 5. **7 gallon \$50.40**

APRICOTS

CHINESE

This variety produces large crops of medium to large fruit that mature early in the season. Fruit has very nice texture and flavor. Best for fresh eating, cooking, canning and drying. **Self-pollinating. Dwarf.** Zone 4.

GOLDCOT

Developed in Michigan, this very cold hardy apricot has a record of producing regular crops of medium to large delicious fruits. Best for fresh eating, jam, canning, cooking and drying. **Self-pollinating. Dwarf.** Zone 5.

HARCOT

Large yellow orange skin. Sweet, juicy, rich flavor. One of the best. A new variety from Canada which has frost hardy late bloom. Resists brown rot and perennial canker. **Self-pollinating. Dwarf.** Zone 5.

KATY

A great apricot for mild winter areas. Fruit is large and very flavorful. Good for fresh eating, drying, or canning. Freestone. Ripens June. **Self-pollinating. Dwarf.** Zone 5.

SWEETHEART

These large, delectable apricots are juicy, firm and flavorful. Matures mid-season. Best for fresh eating. **Self-pollinating. Dwarf.** Zone 5.

WILSON DELICIOUS

Our largest apricot (2 – 2 1/2"), the orange flesh is sweet and tender. Trees are long-lived and vigorous. Best for fresh eating, cooking, drying, canning and freezing. **Self-pollinating. Dwarf.** Zone 5. **7/10 gallon \$42.00**

BLACKBERRIES

APACHE

Erect, thornless blackberry bush released by the U. of Arkansas. Berries are conical with a glossy black finish. Higher yields and largest fruit of the thornless cultivars. **Self-fruitful.**

ARAPAHO

Does not need a trellis. Excellent sweet flavor, good size, firm fruit and heavy production. Ripens two weeks earlier than Navaho and also produces sucker plants which allow it to quickly establish a solid hedge row of plants. **Self-fruitful. Max size 4-5'.**

CHESTER

This thornless variety produces large, very sweet, high quality fruit that ripens in July. Excellent for fresh use, jams, jellies and baked products. **Self-fruitful.** . Zone 5

KIOWA

Thorny erect, largest of Arkansas varieties. Averages 10% sweetness, high yields, good storage. Ripens June, produces for six weeks. **Self-fruitful.** . Zone 5

MARIONBERRY

This is a cross between Boysenberry and wild Blackberry. Berries are as large as Boysenberry with the delicious taste of wild blackberries. Best for fresh eating, jams, preserves, and desserts. Vigorous and thorny. Fruit ripens July. **Self-fruitful.** Zone 5.

NATCHEZ

Erect to semi-erect, thornless blackberry cultivar from the U. of Arkansas. Large, average 8-9 grams per berry. Ripens beginning late June. No substantial common diseases observed. Fruit storage very. **Self-fruitful.** Zone 5.

NAVAJO

goodErect, thornless blackberry cultivar from the U. of Arkansas. High yield, small to moderate size berries, moderately sweet in flavor. **Self-fruitful.** Zone 5.

PRIME JAN

New Arkansas release, variety produces a crop in June, then again in late July and bears until frost. These medium sized berries taste good. Recommended for home gardeners. **Self-fruitful.** . Zone 5

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

TAYBERRY

Developed in Scotland. This is a cross between the blackberry Aurora and the Tetraploid raspberry. Large berries are reddish-purple with an excellent, slightly aromatic flavor. Excellent for freezing, canning, jams, and jellies. Ripens in July. **Self-fruitful**. Zone 5.

TRIPLE CROWN

Triple Crown is a semi-erect, thorn less free-standing, blackberry cultivar. Produces one crop of fruit per year. Excellent eating quality. Mature in summer. **Self-fruitful**. Zone 5. **2/3 gallon \$21.60**

BLUEBERRIES (Plant two varieties for best fruit production)

BECKI BLUE (Rabbiteye)

Tall, upright and spreading, great in hot summer. Sweet light blue fruit. Well drained acidic soil, full sun. Mature size 6' x 10'.

BLUECROP (Northern Highbush)

A mid-season, good flavored berry. Consistently produces cluster of medium to large, light blue fruit of good quality. Hardy and more drought resistant than most. . Early mid-season. Zone 4.

BLUEGOLD (Northern Highbush)

Cold hardy compact, round bush up to 4' has surprising high production and a heavy fruiting habit of truly superior fruit. Mid-season variety of blueberry with exceptionally firm, flavorful and uniform sized berry. Small recessed scar when picked.

BLUEJAY (Northern Highbush)

Grows rapidly and is relatively easy to establish. Long, loose clusters of light blue fruit will hang on the bush for long periods without loss of quality, making it one of the best berries for freezing, pies, and even for canning. Light green colored leaves in summer reveal bright yellow canes and branches in winter. Early mid season.

BLUERAY (Northern Highbush)

This variety produces small, tight clusters of large, medium blue fruit with very sweet, slightly tart, aromatic flavor. . Early mid-season. Zone 4.

BRIGHTWELL (Rabbiteye)

Consistent crops of large, juicy berries that are almost seedless. Ripen in June and July over a long period of time which extends the season. Early mid-season. Zone 4.

BRIGITTA (Northern Highbush)

Very light blue, medium to large sized mostly sweet but with a touch of tartness. Very firm, almost crisp with small, dry scar after picking. They grow in loose clusters. Spreading bush grows up to 6', self pollinating but does better with another variety for cross pollination. Late harvest. Developed in Australia from a cross between Lateblue and Bluecrop. Zone 4.

CHANDLER (Northern Highbush)

Somewhat firm, dark blue blueberries with a sweet flavor. They are very large, up to an inch in width and up to 3 grams in weight. Slightly spreading bush grows 5-6' tall. It's showy leaves make it an attractive bush even when not in bloom. Berries ripen over 4-6 weeks, making it a good blueberry for home gardeners. Early mid-season. Zone 4.

CLIMAX (Southern Rabbiteye)

Ripening early, these berries are medium to large with a dark blue color and a very good flavor. Climax has concentrated ripening with few shriveled or overripe fruit. The shrub has an open and upright habit. Early season.

COVILLE (Northern Highbush)

This variety produces large sized, medium blue fruit with good, aromatic flavor. Excellent for freezing jellies. Late. Zone 5.

DUKE (Northern Highbush)

Early ripening, mildly sweet berry. Heavy, consistent producer of large light blue to purple fruit. Mature size 4' – 6'. Zone 4-7

EARLIBLU (Northern Highbush)

These medium sized, light blue, berries have an excellent mild, sweet flavor. Vigorous variety. Early. Zone 5.

ELIZABETH (Northern Highbush)

Elizabeth has the flavor everyone loves. The balance of sweetness and tartness cannot be duplicated by any other variety. Berries ripen during midseason; the fruits are medium size. Zone 5-7.

ELLIOTT (Northern Highbush)

Nice ornamental bush with bluish green leaves and late blooming flowers. Fruit is small to medium in size and light blue in color. Flavor is mild. Mature size 5' - 8'. Extremely late. Zone 4.

LEGACY (Northern Highbush)

Firm, medium large, light blue blueberries with robust blueberry flavor. Rated as one of the best flavored varieties in USDA trials. The upright bush grows up to 6' tall, heavy production. Zone 5-8.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

MISTY (Southern Highbush)

Sky-blue, medium large, very sweet fruit matures early season from midsummer through fall. Pink and white bell shaped flowers bloom in late spring followed by fruit crop. An attractive shrub with blue-green foliage for beds or the fruit garden. Semi-deciduous shrub. Grows 5-6' tall and wide.

NORTH BLUE (Half High)

A cold hardy plant. Fruits are large, attractive, and full of sweet flavor. Grows to 24" at maturity and is a strong grower. Very nice ornamental plant with deep green foliage in summer and yellow-orange in autumn. Zone 3-8.

NORTHLAND (Northern Highbush)

These berries have a wild blueberry flavor that is great for pies and fresh eating. Very productive and vigorous plant even after the harshest of winters. Early-mid. Zone 3.

POWDERBLUE (Southern Highbush)

Powder Blue has reliable crops of large berries because of its spring frost resistance. The light blue, firm fruit hang in clusters, resist cracking and hold a sweet flavor. The shrub is vigorous and upright. Ripens in mid-late season.

PREMIER (Rabbiteye)

Bumper crops are produced with the distinctive powdery blue color on the large firm berries. The flavor is excellent, and the berries store well. The plant growth is vigorous and upright. Ripens mid-late season.

REKA (Northern Highbush)

Early vigorous, fast growing and adaptable to a wide range of northern climates and soil conditions. Bountiful yields of early ripening, medium sized, tasty berries. Burgundy red fall color is an added landscape bonus.

REVEILLE (Southern Highbush)

The unique crisp, almost crunchy texture and the outstanding popping flavor make this a must for your blueberry patch. Its upright, narrow easy to grow habit, to 5 feet tall, make it a great hedge plant. Heavy pink spring bloom yields loads of medium size light blue berries. Hardy to 0 deg. F, it thrives in hot climates.

RUBEL (Northern Highbush)

A true wild Highbush discovered in the early 1900's, delectable full-flavored small berries, perfect for pies and muffins. Extremely high antioxidant levels, truly the reigning "king" of health foods. Rubel is cold hardy and a consistent producer. Mid-late ripening, small sweet, upright berry.

TIFBLUE (Rabbiteye)

Bearing mid to late season, Tifblue is a very popular and productive variety. The berries are light blue, very firm and quite flavorful. Plant growth is vigorous and upright often used for ornamental hedges. It is the most winter hardy variety.

WOODWARD (Rabbiteye)

Light blue large sized berries which are tart unless fully ripened. Blooms early in season.

3 gallon 21.60 5 gallon \$38.40

CHERRIES

BALATON® (Hungarian Tart)

This large, firm, high quality, tart cherry matures after Montmorency, to extend the tart cherry season. Developed in Hungary. Best for fresh eating and baking. **Self-pollinating. Semi-dwarf.** Zone 5.

BING (Sweet)

Most famous of the sweet cherry cultivars. Good for cooking and eating. Range in color from deep garnet to nearly black. Skin is smooth and glossy and the flesh is firm, sweet and very juicy. **Must be pollinated by another sweet cherry variety. Semi-dwarf.** Zone 5.

BLACKGOLD (Sweet)

This dark red fleshed cherry is a hybrid of Gold & Stella. It combines the best of both parents to produce heavy crops of beautiful, heart shaped fruit with excellent flavor and crack resistant skin. Best for fresh eating. **Self-pollinating. Will pollinate sweet cherries. Semi-dwarf.** Zone 5.

BLACK TARTARIAN (Sweet)

Vigorous, productive, firm, purplish-black, early ripening variety of sweet cherry. Fruit ripens late June with flesh that is dark red, juicy, very rich and delicious. **Must be pollinated by another sweet cherry variety. Semi-dwarf.** Zone 5.

BLACKYORK (Sweet)

The same large, dark red-black, delicious cherries as Bing, but disease resistant and better suited to Eastern growing conditions. Best for fresh eating. **Must be pollinated by another sweet cherry variety. Semi-dwarf. Zone 5.**

DANUBE (Hungarian Tart)

Medium to large, dark red fruits are sweeter than Montmorency. Very productive, naturally dwarf tree. Developed in Hungary. Best for fresh eating and baking. **Self-pollinating. Semi-dwarf.** Zone 4.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

HUDSON (Sweet)

A good flavored, crack resistant, medium-to-large black sweet cherry. Fruit hangs well and keeps in good condition. Tree is vigorous, spreading and moderately productive. Best for fresh eating. **Must be pollinated by another sweet cherry variety. Semi-dwarf.** Zone 5

JUBILEUM (Hungarian Tart)

Dark fleshed tart cherry produces large, high quality fruit. For fresh eating and baking. **Self-pollinating. Semi-dwarf.** Zone 4

KOREAN BUSH CHERRY

Small to medium shrub, profuse white fragrant flowers early spring. Small, sweet, scarlet red cherries. **Height to 7-9'. Self-pollinating.** Zone 4.

KRISTIN (Sweet)

A glossy, purplish black fruit with tender skin. Juicy flesh is meaty and firm. Tree is vigorous, hardy and heavy cropping. Best for fresh eating. **Must be pollinated by another sweet cherry variety.** Not compatible with Van. **Semi-dwarf.** Zone 5.

MONTMORENCY (Tart)

The absolute standard of all tart cherries. Bright red fruit with yellow flesh. Early and heavy producer. Best for fresh eating, pies, cooking, canning and freezing. **Self-pollinating. Semi-dwarf.** Zone 5.

REGINA[™] (Sweet)

A new German variety. High quality, large, dark red firm fruit. Very productive and disease resistant. Best for fresh eating. **Must be pollinated by another sweet cherry variety.** Not compatible with Van. **Semi-dwarf.** Zone 4.

ROYALTON[™] (Sweet)

Large dark purple-red skin. Crack resistant and juicy robust flavor. Strong pollinator for other sweet cherries. **Must be pollinated by another sweet cherry. Semi-dwarf.** Zone 5.

RYNBRANDT (Sweet)

Early season, large, black sweet cherry. Rynbrandt is resistant to fruit cracking and is very tasty. Best for fresh eating. **Must be pollinated by another sweet cherry variety. Semi-dwarf.** Zone 5.

SUREFIRE (Tart)

This late blooming tart cherry has characteristics similar to Montmorency, but is more resistant to late frosts. Best for fresh eating, jams and baking. **Self-pollinating. Semi-dwarf.** Zone 5.

WHITEGOLD (Sweet)

This yellow fleshed sweet cherry is a hybrid of Emperor Francis and Stella. It combines the best of both parents to produce heavy crops of round shaped fruit with excellent flavor and crack resistant skin. Best for fresh eating. **Self-pollinating. Will pollinate other sweet cherries. Semi-dwarf.** Zone 5.

7 gallon \$42.00 15 gallon 78.00

CHESTNUT

DUNSTAN

A blight resistant American x Chinese hybrid. Nuts are superior in size and taste. **Plant two Dunstan chestnuts for proper pollination.** Zone 4.

7 gallon \$57.60

CRANBERRY

BEN LEAR

Burgundy red color, early fruiting period and large size is prized for processing into sauces. Very productive, ripens early season, harvest by hand when red, from late September to late October. Pick before frost. Very beneficial because of their high antioxidant content **Self-fruitful.** Zone 4.

PILGRIM

Pilgrim is an attractive, evergreen groundcover with dainty foliage. Its small pink flowers produce an abundant crop of tasty red berries. Habit is spreading, growing only about 6" in height. **Self-fruitful.** Zone 4.

1 gallon \$7.80 2 gallon \$26.40

FIGS

BLACK MISSION

Fruits all-over black purple, elongated. Fresh watermelon to pink color, good taste. Easily dried, single best all-around variety for south. Forms large tree, do not prune after tree reaches maturity. **Self-pollinating.** Zone 5.

BLACK SPANISH

Extremely hardy, vigorous, fast growing, small tree. Produces two crops of mahogany figs which are very sweet, and rich flavored. Fruit has juicy, red flesh and are best if eaten fresh. **Self-pollinating.** Zone 5.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

BROWN TURKEY

Handsome, low, bushy, plant produces medium to large elongated purple-brown fruit. Everbearing beginning in early June. Mature size 10'. **Self-pollinating.** Zone 5.

CELESTE

These are the "candy" figs, sweet as sugar and great for desserts and gourmet recipes. Fruit is brown to purple. This hardy and vigorous plant Grows 6-10'. **Self-pollinating.** Zone 6.

CHICAGO HARDY

Small to medium fruit with light brown to violet skin and strawberry pink pulp. Excellent flavor and very hardy, resembles Brown Turkey. **Self-pollinating.** Zone 6.

ITALIAN EVERBEARING

This prolific bearer is very similar to Brown Turkey. Fruit is large, with a reddish-brown skin. The flesh is pink and sweet to eat. Large bush form. Mature size is 15'. **Self-pollinating.** Zone 7

LATTARULLA

Also known as Italian Honey Fig, this reliable and hardy variety will bear good crops of large, greenish-yellow fruit with sweet, light amber flesh. Lattarulla bears two crops in one season, one ripening in late July and the second in mid-September. Mature size 12-15'. **Self-pollinating.** Zone 7.

NEGRONNE

Fruit is small and almost black in color with tasty, dark red flesh. Variety is vigorous and produces two crops each season, one ripening in late July and the second in mid-September. This is a naturally small tree that works well for container gardening or small spaces. Mature size 10'. **Self-pollinating.** Zone 7.

PETER'S HONEY

Originally from Sicily, this variety is the sweetest of all figs! The light greenish fruit is tender and sweet. Mature height is 10'. Best for fresh eating and cooking. **Self-pollinating.** Zone 7.

STELLA™

This variety was brought to the States many years ago by an Italian sailor. Stella™ has large, sweet, purplish-red flesh, and will ripen in cooler climates. Mature 10'. **Self-pollinating.** Zone 7.

3 gallon \$26.80 5 gallon \$38.40

Gooseberry

BLACK VELVET

The Champaign of Gooseberries. The deep purple fruits are the size of seedless grapes. They are very vigorous in growth. Flavor is very good to excellent when vine ripened. Black Velvet has won awards for its superb qualities. Zones 4-8.

JAHNS PRAIRIE

Otto L. Jahn discovered this wild selection in Alberta, Canada. The plants are high yielding with reddish-pink fruits. Ripening season is mid season extending to late season. Besides being resistant to mildew and gray mold the plants are very cold tolerant. Zones 4-8.

PIXWELL

Practically thornfree, makes delicious pies, tasty preserves. Fruits hang on slender stems an inch below the branches where they're easy to pick. Very hardy, does well in average soil. Needs little or no feeding or special care, lasts years and years. Self fruitful and should bear the first year after planting. Mature height 3-4' h & w Plant 5' apart. Zones 4-8.

1 gallon \$9.75 7 gallon \$26.80

GOUMI

SWEET SCARLET™

This variety has juicy and aromatic fruit with a unique sweet-tart flavor that resembles pie cherries. Very good eaten fresh, it is also used to make preserves. Mature height 6'. Self-pollinating. Zone 4. **Self-pollinating.** Zone 4.

2 gallon \$30.00

GRAPES

CABERNET SAUVIGNON

Small-to-medium, round purplish black berries with strong flavor. Used in making distinctive, red Bordeaux-type wines. Vigorous, upright vine. **Self-fruitful.** Zone 7.

CATAWBA RED

Large, deep coppery-red fruit. Juicy, sweet, rich taste. Medium size clusters. Ripens September into October. **Self-fruitful.** Zone 5

CONCORD SEEDLESS

Seedless. Standard of quality for bluish-black grapes. Excellent distinctive flavor used for table, juice, jelly and wine. Vigorous, hardy, strong growing, productive vine. **Self-fruitful.** Zone 4.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

FRONTENAC

Extremely winter hardy red grape variety that produces a full bodied wine of high quality. Resistant to common grape diseases. Ripens mid-season. **Self-fruitful.** Zone 3.

HIMROD

Seedless. Medium sized, oval, golden yellow fruit. Sweet, delicious, juicy flesh. Hardest of the white seedless grapes. **Self-fruitful.** Zone 5.

JUPITER

Medium sized clusters; large, blue, seedless with distinct Muscat flavor. **Self fruitful.** Zone 5

MARQUIS

A white seedless grape that grows in large clusters of large berries. Flavor is fruity and rich and is good for fresh eating and wine making. **Self-fruitful.** Zone 5.

MARS

A vigorous, blue seedless grape. The flavor is mildly labrusca, similar to Campbell's Early, and the berries are slipskin (having a tough skin that separates readily from the pulpy flesh). Clusters are medium sized, cylindrical, and well filled. The vines are resistant to several major diseases. Vines may bear fruit precociously, and production should be controlled on young vines to prevent delays in establishment. **Self-fruitful.**

NIAGRA

The most popular commercial cultivar of seedless white grapes on the market. Sweet to the taste, not acidic like some white grape varieties. Used for making wine, jam, jellies, and juice. Produces large clusters of grapes. **Self-fruitful.** Zone 5.

RELIANCE

Seedless. This juicy grape is a favorite for its deep red color and rich flavor. Vigorous vines give you big clusters of these beauties. **Self-fruitful.** Zone 5.

SANGIOVESE

Italy's most commonly-planted red grape variety. Sangiovese is slow and late to ripen. **Self-fruitful.** Zone 7.

SAUVIGNON BLANC

Well formed, compact clusters of medium-sized greenish grapes. Vines are vigorous growers. **Self-fruitful.** Zone 8.

SUNBELT

Concord type grape variety, heat tolerant and disease resistant This blue juice grape has excellent quality and flavor. **Self-fruitful.** Zone 5.

VANESSA RED

Red dessert grape of excellent quality. The vine is moderately vigorous and among the hardest of seedless grapes. Berries are medium in size and medium, well filled clusters. Storage potential is good. The flavor is mild and fruity, and berry texture is firm. The fruit quality is among the best of the red seedless types. **Self-fruitful.**

VENUS

Large deep purple-to-black seedless grapes borne on large clusters. A fine quality for fresh eating, juice and jellies. The vines are disease resistant and winter hardy. **Self-fruitful.** Zone 7-9.

ZINFANDEL

Heat loving wine grape, red-skinned. Intense fruitiness and lush texture. Typically tastes of bramble and fresh or fermented red berries. The high heat assures the grower of a spicy wine grape that has a high sugar content. **Self-fruitful.** Zone 6-10.

Wine Grapes 2/3 gallon \$28.80 Juice Grapes 2/3 gallon \$21.60

MUSCADINE GRAPES

COWART

Black **self-fertile.** 17% sugar content, excellent flavor, large clusters, medium size, very productive. Ripens early season.

DARLENE

Bronze female. The best of the bronze muscadines, consistently large size through out vines, not erratic, 22% sugar, dry scar, melting pulp, excellent quality. **Needs pollinator.**

DIXIE RED

Red **self fertile.** Vigorous vine, good quality, large clusters and high yields. Ripens mid-season. Great for juice, wine, and fresh fruit. 17% sugar content.

GRANNY VAL

Bronze **self fertile.** 18% sugar content, high yield, excellent quality. Ripens mid to late season. Very heavy producer. Heaviest producing variety of muscadine.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

LATE FRY

Bronze **self fertile**, 20% sugar. Very late variety, much improved over Granny Val. Very large clusters, good quality, very vigorous and high yields.

PINEAPPLE

Bronze, **self fertile** 16% sugar. Large fruit and clusters, most productive and vigorous, good quality, disease resistant. Taste similar to pineapples. Mid late season.

SCUPPERNONG

Bronze, female, 17% sugar content, excellent flavor with small clusters. A variety all people know, production good, ripens mid-season. **Needs pollinator.**

SUPREME

Black female, best of the black muscadines. It is the largest muscadine developed at this time. Very heavy producer. 22.5% sugar. Ripens mid-late season, very vigorous, skin edible, large clusters disease resistant, dry scar. **Needs pollinator.**

3 gallon \$21.60

HONEYBERRY (Plant two varieties for proper pollination)

BLUE FOREST

A very attractive spreading shrub, with soft, velvety bright green leaves. Fruit is large, dark blue, tasty.. Mature size 3'.

BLUE VELVET

This compact spreading variety is very unique with it's attractive grayish-green velvety foliage. It's very large blue berries are flavorful and great for fresh eating and preserves. Plant two varieties for proper pollination. Mature size is 4' x 4'.

2 gallon \$28.80

HOPS

CASCADE

Flowers, citrus & spice with grapefruit the noticeable fragrance. This medium aroma balances the low bittering value. Very popular hop among craft brewers. 4-7% Acid range.

NUGGET

Strong herbal/slight spice aroma and high bittering value (along with desirable growing traits) has brought this hop variety to the forefront of the industry. 11-16% Acid range.

WILLIAMETTE

The king of aroma hops in the U.S. with its modest bittering value and the joyous harmony of flowers, fruit, earth and spice. 4-6% Acid range.

ZEUS

High on the bittering scale yet also valued for its oil content creates a hop that is an interesting dichotomy of sharp and herbal. 14-17% Acid range.

1 gallon \$14.25

JUJUBES

AUTUMN BEAUTY™

Attractive and productive, Autumn Beauty™ is one of the most popular varieties in China. This hardy, very early ripening selection bears abundant crops of large, very sweet, chocolate-brown fruit. **Crops heavier if two varieties are planted. Mature height 8'-10'.** Zone 5.

LI

Li is a truly beautiful tree that produces an abundance of very large, mahogany brown fruit. The fruit is sweet, crisp, and flavorful. It is shaped like a small egg with a very small, almost unnoticeable seed. **Crops are heavier when two or more varieties are planted. Mature height 8'-10'.** Zone 5.

7 gallon \$57.60

KIWI

ANNA

Grape-size fruits. Vigorous, productive vine. Space 15' apart. Very ornamental with showy red leaf stems. **Needs a mate.** Zones 5-9.

ISSAI

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

Bears heavy crops of large, sweet and delicious fruit. Often bears fruit the year after planting and is ready to harvest in mid to late September. Reportedly self fertile although crops will be heavier and more reliable if it is planted with a male for pollination.

MEADER

A **male pollinator** for other *A. arguta* cultivars. Can also be used to pollinate *Actinidia callosa* and *A. purpurea*. Zone 4. **1 gallon \$7.80**

LIGNONBERRY

RED PEARL

The shrub habit is attractive, evergreen and spreading. Flowers are white followed by red berries. Berries are high in vitamin C and slightly tart when eaten fresh but are great when used in preserves, jellies, syrups and wines. **Mature height 12"-14". Self-fruitful.** Zone 2. **2 gallon \$30.00**

MEDLAR

IBREDA GIANT

Small tree with long, dark green tropical looking foliage accented by large white flowers and striking brown fruit. The fruit ripens in mid to late October, becoming soft and turning very dark brown. It is ready to eat and has the taste and texture of spiced applesauce. Likes full sun and adapts to most soils. Mature height 8-10'. **Self pollinating.** Zone 4. **7 gallon \$54.00**

MULBERRY

BLACK BEAUTY

The tasty, black-berry fruit on this Persian Mulberry is large, black and juicy. Very attractive to birds. Some drought tolerance when established. Budded at 48" for low branching. **Mature height 15'. Self-pollinating.** Zone 4.

ILLINOIS EVERBEARING

This handsome tree has beautiful dark green, tropical-like foliage. It is valued most for its tasty 1 ½ " long, virtually seedless fruit that is good for both fresh eating and cooking. **Mature height 25-30'. Self-pollinating.** Zone 5. **7/10 gallon \$42.00**

TEAS WEeping FRUITING

Ornamental tree with slender weeping branches. Bears blackberry-like fruit in summer months. Birds highly attracted to fruit. Very cold hardy. **Mature height 12' x 16' wide. Self-pollinating.** Zone 3. **10 gallon \$112.50**

NECTARINES

ARCTIC GLO

This white fleshed nectarine is juicy and sweet. The fruit is a brilliant crimson-red with a creamy white under color. Best for fresh eating. **Self-pollinating. Dwarf.** Zone 5.

GOLDEN PROLIFIC

Large with yellow skin with yellow flesh mottled with orange red. It has flavor that is rich and sweet, easily among the tastiest of nectarines. Genetic dwarf is freestone, produced from a tree only reaching 5' tall. It produces heavily, ripening mid to late August. Pink blossoms **Self-pollinating. Dwarf.** Zone 5.

HARDIRED GIANT

Very cold hardy, Hardired nectarine matures mid-season. The medium sized fruits should be thinned well to attain best size. Resistant to brown rot. Freestone. Best for fresh eating. **Self-pollinating. Dwarf.** Zone 5.

HONEYGLO MINI

A genetically dwarf tree that will grow 4-6' tall and produce medium sized gourmet quality fruit. Best for fresh eating and canning. **Self-pollinating. Miniature** Zone 5.

MERICREST

A super hardy variety that can withstand temperatures of -28°F. The fruit has a tangy, sweet taste and is best for fresh eating, canning and desserts. Freestone. **Self-pollinating. Dwarf.** Zone 5.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

REDGOLD

Produces very high quality fruit that is sweet, juicy and slightly tangy at maturity. It is very large and deep red in color. Best for fresh eating, cooking, canning and freezing. Freestone. **Self-pollinating. Dwarf.** Zone 5.

SUMMER BEAUTY

Maturing early in the season, Summer Beauty nectarine produces loads of bright red, juicy, sweet nectarines. Disease resistant. Best for fresh eating and canning. Freestone. **Self-pollinating. Dwarf.** Zone 5.

SUNGLO DWARF

This variety is a heavy producer of mid-season fruit with beautiful color and exceptional flavor. **Self-pollinating. Dwarf.** Zone 5.

7 gallon \$42.00 15 gallon \$78.00

PAWPAW

ASIMINA TRILOBA

Seedling. Exotic and attractive, this hardy, native american fruit has a banana-like flavor with creamy custard-like flesh. This tree produces unusual purple flowers before its large, tropical looking foliage appears. Fall color is a striking yellow. **Two seedling pawpaws will cross pollinate.**

Mature height 12'-15'. Zone 5.

7 gallon \$50.40

PEACHES

BELLE OF GEORGIA

A late season, white fleshed peach that is exceptionally hardy. Mature fruit has a wonderful aroma and very sweet characteristic taste. Best for fresh eating, pies, cooking, and canning. Freestone. **Self-pollinating. Dwarf.** Zone 5.

BLUSHINGSTAR DWARF

A firm, high quality, white flesh peach which matures late in the season. Very productive tree. Best for fresh eating, shipping, and storing. Freestone. **Self-pollinating. Dwarf.** Zone 5.

CRESTHAVEN

This hardy, late season peach is a most consistent producer. the yellow flesh is juicy and firm. Best for fresh eating, canning and cooking. Freestone. **Self-pollinating. Dwarf.** Zone 5.

EMPRESS PATIO TREE

Outstanding peach due to its delicious, juicy, sweet flavor. Large, highly colored pink to red skin. Prettiest fruit and bloom. Most cold hardy of genetic dwarf peaches. Clingstone. Ripens late July to Early August. **Self-pollinating. Miniature. (4-6')** Zone 5.

GLEASON ELBERTA

A large yellow skin peach with red blush. Yellow flesh of excellent quality. Beautiful strain of Early Elberta and more frost tolerant. Ripens early July. **Self-pollinating. Dwarf.** Zone 5.

JULY ELBERTA

A large, juicy, yellow fleshed peach that is best for fresh eating, canning and freezing. Mid-season. Freestone. **Self-pollinating. Dwarf.** Zone 5.

LORING

Large, mid-season, yellow peach lends itself well to canning, cooking and fresh eating. Freestone. **Self-pollinating. Dwarf.** Zone 5.

RED HAVEN

The standard by which all peaches are compared. Yellow fleshed. Exceptionally hardy. Matures early and crops heavily. Best for fresh eating, pies cooking and freezing. Semi-freestone. **Self-pollinating. Dwarf.** Zone 5.

RELIANCE DWARF

The hardiest peach available produces heavy consistent crops. For planting in those cold areas or on poor sites for consistent crops of high quality, yellow fleshed peaches. Best for fresh eating, pies, cooking and canning. Freestone. **Self-pollinating. Dwarf.** Zone 5.

SANTA BARBARA

Large yellow skin with red blush. Yellow fleshed freestone, red near pit. Flesh has fine, melting, delightfully sweet combined with excellent peach flavor. Arguably the best tasting peach for most homeowners. **Self-pollinating. Dwarf.** Zone 5.

SATURN MINI DONUT

Known as the "donut" peach because of its shape, this white-fleshed peach is tender, mild and sweet. Fruit is excellent for fresh eating or for desserts. Matures early season. Very hardy and productive. Freestone. **Self-pollinating. Dwarf.** Zone 5.

SCARLETPEARL DWARF

This white fleshed peach matures early in the season. Fruit is large with excellent flavor. Best for fresh eating. Semi-freestone. **Self-pollinating. Dwarf.** Zone 5.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

SENSATION DWARF

These genetically dwarf trees will only grow to a height of 4'-8' and you will be amazed at the amount of full sized, yellow-fleshed fruit this little tree will produce. Best for fresh eating, desserts, and canning. **Self-pollinating. Miniature.** Zone 5.

SOUTHERN FLAME PATIO TREE

Large yellow skin overspread with red. Firm, crisp, melting, yellow flesh. Good eating quality. Freestone. Good aroma. Ripens early to mid July. Mature height is 5'. **Self-pollinating. Miniature.** Zone 5.

SUMMER PEARL™

A very hardy, white-fleshed mid-to-late season variety. It has fantastic fruit quality and excellent flesh firmness. Best for fresh eating. Freestone. **Self-pollinating. Dwarf.** Zone 5.

WHITE LADY DWARF

A mid-season, firm, white fleshed peach with a mild, very sweet taste. Cold hardy and very productive. This beautiful red skinned peach is a real winner. Best for fresh eating. Freestone. **Self-pollinating. Dwarf.** Zone 5. **7 gallon \$42.00 15 gallon \$78.00**

COLONADE® PEACHES

CRIMSON ROCKET™

Upright growth means lots of peaches in a little space. Peaches are full sized, yellow-fleshed, dessert-type, with smooth, sweet flesh. Ripens mid-season. **Freestone. Mature height 15'** but can be pruned lower. **Self-pollinating.** Zone 5. **7 gallon \$50.40**

PEARS

BARTLETT DWARF (European)

The most popular pear variety in the U.S.A. The smooth buttery flesh is sweet and juicy. Adaptable to many different soil types and growing areas. Best for fresh eating, cooking, and canning. **Must be pollinated by another Eur. pear, except Seckel. Dwarf.** Zone 5.

CHOJURO (Asian)

Medium to large, flattened, golden brown fruit. Early, reliable bearing variety. Habit is somewhat droopy. Pollinated with another Asian pear. **Dwarf.** Zone 4.

COMICE (European)

Comice is a luscious, rich flavored well known dessert pear. The skin color is a beautiful golden yellow tinged with a hint of red. Best for fresh eating, salads, and baking. **Must be pollinated by another European pear. Dwarf.** Zone 5.

DAISUI LI (Asian)

Large, medium green fruit color. Flesh is bursting with juicy, sweet flavors, a real taste delight. Best for fresh eating. **Must be pollinated by another Asian pear. Dwarf.** Zone 5.

GOLDEN RUSSET BOSCH (European)

A favorite of many with its sweet, juicy white-yellow flesh and cinnamon colored russet skin. Best for fresh eating and canning. **Must be pollinated by another European pear. Dwarf.** Zone 4.

HARDY GIANT PEAR (Asian)

Also known as Olympic Giant or Korean Giant, this giant sized (3 ½ - 4"), round Asian pear has excellent flavor. Fruit is a beautiful, russet brown when ripe. Best for fresh eating and canning. **Must be pollinated by another early blooming Asian pear. Dwarf.** Zone 5.

HONEYSWEET DWARF (European)

This small to medium sized European pear really is as sweet as honey. Its crisp, smooth flesh is delicious. Best for fresh eating and canning. **Self-pollinating.** Will pollinate other European pears. **Dwarf.** Zone 5.

HOSUI (Asian)

An early season, russet type, with round globular shape it's higher acid content adds a spritz zip to the mellow flavor. Best for fresh eating. **Moderately self-fruiting** but for maximum harvests pollinate with 20th Century. Will pollinate other Asian pears. **Dwarf.** Zone 6

KEIFFER DWARF (European)

A large, green-yellow pear that matures late. Long-lived trees are very resistant to fire blight. Best for fresh eating and winter keeping. **Self-pollinating.** Will pollinate other European pears. **Dwarf.** Zone 4

MAXINE (European)

Large, golden yellow fruit with snow-white flesh. Fruit is similar to Bartlett but the tree is resistant to fire blight. Best for fresh eating, canning, and preserves. **Must be pollinated by another European pear. Dwarf.** Zone 5.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

MOONGLOW (European)

This wonderful European pear matures about a week after Bartlett and shows some resistance to fire-blight. The medium to large pears are sweet and juicy. Best for fresh eating, canning, and cooking. **Must be pollinated by another European pear. Dwarf.** Zone 4

RAJA (Asian)

This is a must have variety if you like flavor. The fruit is an attractive, golden brown with a very sweet, richly flavored, quite delectable taste. This hardy variety is very productive and disease resistant. Best for fresh eating. **Must be pollinated by another Asian pear. Dwarf.** Zone 4.

COLESVILLE NURSERY EDIBLE FRUIT TREES, SHRUBS, AND VINES

YELLOW ANN

This variety is everbearing and produces large yellow fruit on new canes. Flavor is very sweet. **Self-fruitful.** Zone 4

2/3 gallon \$21.60

SEA BERRY

SEA BERRY LEIKORA

A German variety valued for both fruit and ornamental quality, this variety bears large, bright orange berries. Fruit ripens in September and remains on the plant even after heavy frost. Habit is somewhat compact and spreading. Male Sea Berry required for proper pollination. Mature height is 6'. Zone 3.

SEA BERRY MALE

A striking ornamental with large, golden-brown, flower buds. The Male Sea Berries do not produce fruit but will pollinate the female varieties. One male plant can pollinate up to 8 female plants. Mature height is 6-10'. Zone 4.

2 gallon \$30.00

WALNUTS

BLACK GEM

Produces large quantities of high quality nuts in just 5-6 years. Delicious nuts are thin husked, light colored and offer a superior nutmeat-to-shell ratio. Good for cooking. **Self-pollinating.** Zone 5.

CHAMPION ENGLISH

Rich, flavorful nuts in thin, easy-to-crack shells. Produces nuts in 6-7 years. **Requires pollinator.**

BOUNTIFUL BUTTERNUT

Grafted tree. Tree produces bountiful crops of mild flavored nuts. These great tasting nuts are easy to shell and are great for fresh eating and baking. Mature height is 50'. **Self-pollinating.** Zone 3.

7 gallon \$57.60

Pollination Guidelines

APPLES

Golden Delicious, Newton Pippin and Red Rome are self-pollinating. Winesap and Stayman are pollen sterile and will not pollinate other apples but must be pollinated. All of our other apples will cross pollinated. The self-pollinating apples will cross pollinate all other varieties.

APRICOTS

All apricots are self-pollinating and can be planted alone.

CHERRIES

Blackgold and Whitegold are self-pollinating sweet cherries and will pollinate any other sweet cherry variety. All of the other sweet cherry varieties require pollination. Balaton, Danube and Jubileum are all self-pollinating Hungarian tart cherries that are easy to grow, very productive and naturally small. Their fruit has a unique flavor, combining the best of sweet cherries and pie cherries. Our tart cherries are self-pollinating and will not pollinate the sweet varieties.

PEARS

All of our European pears require pollination with the exception of Keiffer and Honeysweet. These two self-pollinating pear varieties will pollinate the other European varieties. Asian pears also require pollination with the exception of Housi which is self-pollinating and will pollinate other Asian pears. Asian and European pears will generally not cross-pollinate.

PLUMS

All of our European varieties are self pollinating, but can be used as pollinators for other European plums. Santa Rosa are self-pollinating Japanese plums, all other Japanese plums need another variety of Japanese plum for cross-pollination.

PEACHES AND NECTARINES

All of our varieties are self-pollinating and can be planted alone.
